Fuji Electric

Fuji Electric

A MANUFACTURER

WITH A HISTORY OF OVER 100 YEARS

ABOUT US

Founded in 1987, Fuji Electric Europe GmbH is supplying frequency inverters and power electronics to customers all over Europe, Africa and the Middle East. Our outstanding reputation is based on reliable quality, excellent product performance and innovating technology.

Our mother company Fuji Electric is a leader in electronics manufacturing and energy technology with more than 100 years of experience since 1923. As a pioneer of the industry to develop the first general purpose Variable Speed Drive ever in 1976, the company continues to design and develop solutions until today.

Applications for our drives and inverters include conveyor systems, water, HVAC and lift applications, general industrial applications, as well as renewable energies applications like wind and solar power. The FRENIC-Series is equipped with functions to meet all types of requirements, providing easy maintenance, saving of energy and cost and therefore environmental friendliness. Discover with this Selection Guide which series suits you best.

CONTENT

Brand Promise

Through our pursuit of innovation in electric and thermal energy technology, we develop products that maximize energy efficiency and lead to a responsible and sustainable society.

	3-phase 400 VAC (HHD)	0.4 to 630 kW						
	3-phase 200 VAC (HND)	7.5 to 110 kW	120% for 1 min					
	3-phase 400 VAC (HND)	7.5 to 710 kW						
	3-phase 200 VAC (HD)	0.4 to 90 kW	150% for 1 min 200% for 3 s					
	3-phase 400 VAC (HD)	37 to 710 kW	150% for 1 min					
	3-phase 400 VAC (ND)	45 to 800 kW	120% for 1 min					
	3-phase 200 VAC (LD)	7.5 to 110 kW	120% for 1 min					
	3-phase 400 VAC (LD)	7.5 to 710 kW						
FRENIC-VG VG1 unit type	3-phase 200 VAC (HD)	0.75 to 90 kW	150% for 1 min	11	4 + 2	3	3	0.1 to 500 Hz
	3-phase 400 VAC (HD)	3.7 to 630 kW	200% for 3 s					
	3-phase 400 VAC (MD)	110 to 450 kW	150% for 1 min					
	3-phase 200 VAC (LD)	37 to 110 kW	120% for 1 min					
	3-phase 400 VAC (LD)	37 to 710 kW						
FRENIC-VG VG1 stack type	3-phase 400 VAC (MD)	30 to 800 kW	150% for 1 min					0.1 to 150 Hz
	3-phase 690 VAC (MD)	90 to 450 kW						
	3-phase 400 VAC (LD)	37 to 1000 kW	110% for 1 min					
	3-phase 690 VAC (LD)	110 to 450 kW						
FRENIC-Ace-H E2E-H/E2S-H	1-phase 200 VAC (HND)	0.1 to 30 kW	120% for 1 min	7	2 + 1	2	2	0.1 to 500 Hz
	1-phase 200 VAC (HHD)	0.1 to 22 kW	150% for 1 min 200% for 0.5 s					0.1 to 500 Hz
	3-phase 400 VAC (ND)	0.75 to 315 kW	120% for 1 min					0.1 to 120 Hz
	3-phase 400 VAC (HD)	0.75 to 250kW	150% for 1 min					0.1 to 500 Hz
	3-phase 400 VAC (HND)	0.75 to 280kW	120% for 1 min					0.1 to 500 Hz
	3-phase 400 VAC (HHD)	0.4 to 220kW	150% for 1 min 200% for 0.5 s					0.1 to 500 Hz

*1 The behaviour of analog input and output can be switched by settings. Refer to the catalog of each series.
*2 Consult our sales representatives.
*3 The inverter trips when the output frequency upper limit of 599 Hz is exceeded due to a review of export control regulations (frequency converter).

∗ Special software version

WIRING DIAGRAM

For main power input and inverter output

AC Reactor [ACR□-□□□]

Used when the power supply voltage is unstable.

Ferrite ring for reducing radio noise [ACL-40B, ACL-74B, F200160]

Used to reduce radio noise. Suppressive effect to the frequency band is available by approximately 1MHz or more. This is appropriate as simple measure against noise since it affects broad range in the frequency band.

EMC compliance filter [EFL□□□-, FS□□, FN□□]

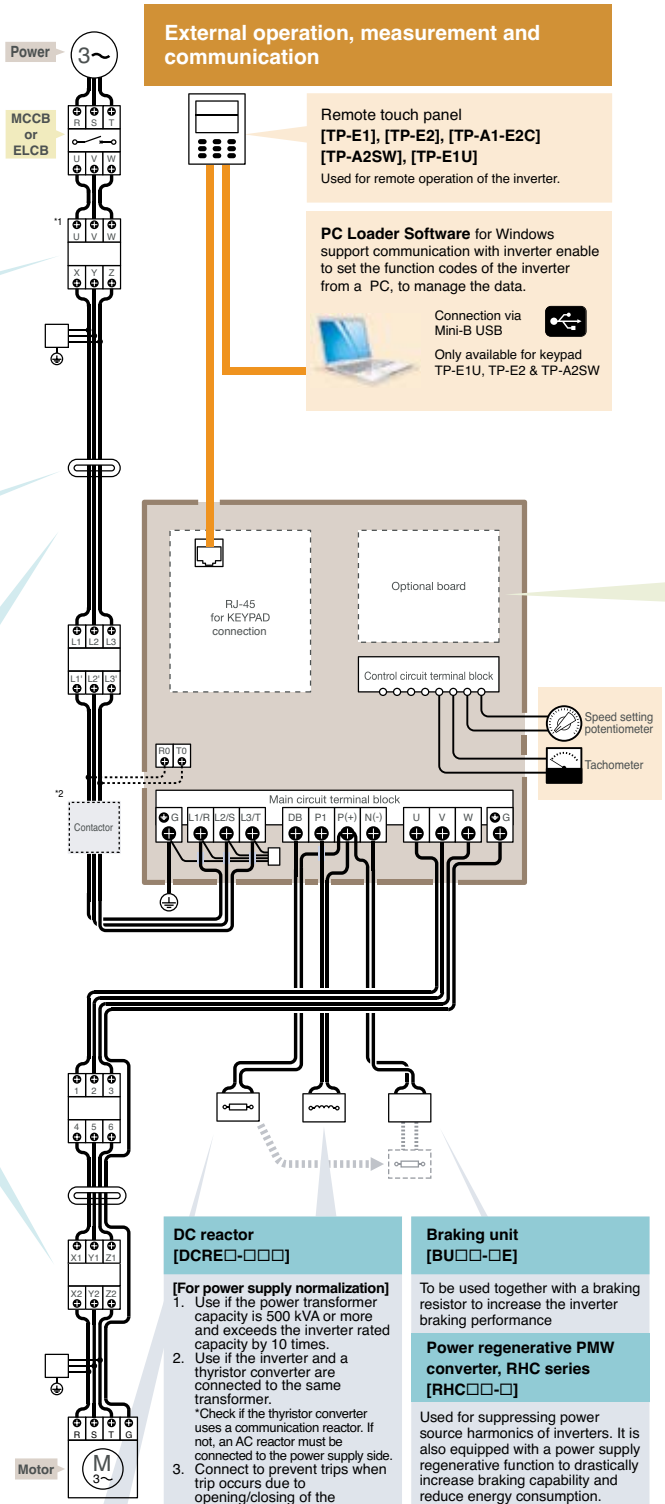
Dedicated filter to comply with the European EMC Directive (Emission). Install the filter while referring to the details in the installation manual.

Output circuit filter

Connected to the output of an inverter to:

- Suppress fluctuations of motor terminal voltage
- Prevent damages to the motor insulation due to surge voltage in 200/400/690 V series inverter

*This filter is not limited by carrier frequency. Also, motor can be tuned while this option is installed. Sinus or dV/dt filter depends on fc.



External operation, measurement and communication

Remote touch panel
[TP-E1], [TP-E2], [TP-A1-E2C] [TP-A2SW], [TP-E1U]
Used for remote operation of the inverter.

PC Loader Software for Windows support communication with inverter enable to set the function codes of the inverter from a PC, to manage the data.

Connection via Mini-B USB

Only available for keypad TP-E1U, TP-E2 & TP-A2SW

Built-in option cards

Control option cards

Relay Output Interface Card [OPC-■-RY2]
Conversion of transistor outputs of the inverter to relay output signals

Digital Interface Card [OPC-■-DIO], [OPC-G1-DI/DO]
Frequency setting with binary or BCD digital signals

Analog Interface Card [OPC-■-AIO]
Torque control with external analog signals

PG Interface Card [OPC-■-PG□]
PG vector control with feedback signals by the encoder [OPC-■-PMPG]
Synchronous motor operation with sensors enabled by combination with MEGA (synchronized motor drive type)

Resistance Temperature Detector Input Card [OPC-PT]
Resistance temperature detectors (RTD) can be connected directly to the inverter without a converter, converting temperatures to digital values.

Communication option cards

RS-485 Communications Card [OPC-■-RS]
Data link between a computer with an RS-485 interface and the inverter

T-Link Communications Card [OPC-■-TL]
Data link between PLC (MICREX-F) and the inverter

PROFIBUS-DP Communications Card [OPC-■-PDP2, PDP3]

DeviceNet Communications Card [OPC-■-DEV]

CANopen Communications Card [OPC-■-COP2]

CC-Link Communications Card [OPC-■-CCL]

LONWORKS Communications Card [OPC-■-LNW]

Profinet Communications Card [OPC-■-PNET]

OPC-PRT, -PRT2, -PRT3

Ethercat Communications Card [OPC-ETC2]

DC reactor [DCRE□-□□□]

[For power supply normalization]

1. Use if the power transformer capacity is 500 kVA or more and exceeds the inverter rated capacity by 10 times.
2. Use if the inverter and a thyristor converter are connected to the same transformer.
   *Check if the thyristor converter uses a communication reactor. If not, an AC reactor must be connected to the power supply side.
3. Connect to prevent trips when trip occurs due to opening/closing of the phase-advancing capacitor for the power supply lines
4. Use if the voltage unbalance exceeds 2%.
5. Mandatory for 55 kW and above in some series

[For improving the input power-factor and reducing harmonics]

- Used to reduce the input harmonic current (connecting power-factor)
- For the drop effect, refer to the guideline appendix.

Braking unit [BU□□-□E]

To be used together with a braking resistor to increase the inverter braking performance

Power regenerative PMW converter, RHC series [RHC□□-□]

Used for suppressing power source harmonics of inverters. It is also equipped with a power supply regenerative function to drastically increase braking capability and reduce energy consumption.

*Use in combination with the RHC series dedicated pressurization reactor, resistor, and capacitor.

Dedicated filter for RHC series
A filter dedicated for RHC series, which is used when other electronic devices are connected to the same power supply.

*Use this filter in combination with the dedicated filter reactor, filter condenser and filter resistor as a set.

Braking resistor [DBE□□-□, DBE□□-□C]

Increases braking capability for highly frequent stopping and large moment of inertia. When used together with a braking unit, connect this to the connection terminal of the braking unit.

Attachment for IP40 [P40■-□□]

Converting the protection structure of the inverter to all-closed form (IP40)

NEMA 1 Kit [NEMA1-□□□■-□]

Converting the protection structure of the inverter to NEMA 1 standards (certified for UL TYPE 1)

Compatibility attachment [MA-■-□□]

An attachment for providing mount compatability with old models manufactured by our company

Rail mount base [RMA-■-□□]

An attachment for mounting to IEC rail with a width of 35 mm

Attachment for external cooling [PB-■-□□]

An attachment for taking the cooling fin of the inverter out of the board

Peripheral and structure options

The series names (C2, E2, LM1, LM2, G2, AR1, AQ1, VG1) are put on the place of ■ in the type names.

NOTE: Some accessories not feature in this selection guide, please consult your local Fuji Electric.

INVERTER SERIES
GENERAL PURPOSE

FRENIC-MEGA G2

Scan me or click me

FRENIC-MEGA G2 SERIES

FRENIC-MEGA G2 series is the successor of the G1 series. Inherits the excellent performance specifications and functionality of the G1 series while providing a more stylish design. High basic performance, suitable for various applications, easy maintenance, and after all an inverter that is environmentally restistant. The G2 series is designed to meet today's demanding market requirements for a more precise and stable speed control of driven equipment, which improves the overall productivity.

- Safety enable input (compliant to EN/ISO13849- PL=d, cat. 3)
- Built-in EMC filter for all capacities (compliant to EN 61800-3, category C3)
- Sensorless vector control mode (100% torque at 0 Hz)
- Advanced PID functions (dancer control)
- Brake control function
- Customizable logic (mini PLC, 260 steps), superior flexibility
- 3 slots for 3 different options at the same time (encoder, fieldbus, I/O expansion)
- Removable control terminals
- External EMC filter (footprint up to 22 kW) for higher EMC compliance (EN 61800-3, category C2)
- Marine approval DNV + NK

FRENIC-ACE E2 SERIES

FRENIC-ACE is the inverter that produces excellent cost-performance with maintaining its high performance through optimal design. With 200 steps of customized logic as a standard feature, it enables users to customize their inverters from simple logistics function to full-scaled programming. As a standard inverter which can be applied to various machines and devices, FRENIC-Ace can be used in almost any type of application from fans and pumps up to specialized machines.

- Customizable logic (mini PLC, 200 steps), superior flexibility
- Quadruple rating
- CAN Open communications built-in as standard
- 10 years lifetime design
- Wide variety of functions as a standard feature
- Safety enable input STO (compliant to EN/ISO13849-1, SIL3, PI=e, cat. 3)
- Optional multifunctional keypad
- Closed loop for IM and Sensorless PMSM control modes

*Available as cabinet solution

FRENIC-VG SERIES (UNIT)

With FRENIC-VG, Fuji Electric has concentrated its technologies to deliver the best-performing inverter on the market. In addition to its basic performance, this model features great improvements:
support for previously difficult applications due to technical and capability limitations, easier and more user-friendly maintenance, as well as environmental friendliness and safety. With using its vector control, FRENIC-VG unit type covers various applications which require powerful but also accurate performance.

- Powerful: from 0.75 kW to 710 kW in triple rating HD, MD and LD
- Strong: even in hard environments such as sulfurizing gas, salty environments, dust, humidity, etc.
- Flexible: IM (open and closed loop) and PMSM (closed loop) control
- Torque accuracy: +/- 3%
- Current loop bandwidth: 2000 Hz
- Speed control accuracy: +/- 0,005%
- Speed loop bandwidth: 600Hz
- Connected to the world: USB on board, typical field buses and Ethernet based field bus

GENERAL PURPOSE

Available as cabinet solution:
all types except for FRN30SVG1S-4E to FRN110SVG1S-4E

FRENIC-VG SERIES (STACK)

With FRENIC-VG, Fuji Electric has concentrated its technologies to deliver the best-performing inverter on the market. In addition to its basic performance, this model features great improvements:
support for previously difficult applications due to technical and capability limitations, easier and more user-friendly maintenance, as well as environmental friendliness and safety. With using its parallel installation, FRENIC-VG stack type will cover various applications which require forceful performance.

- Powerful: 30 kW to 3.8 MW in dual rating (MD/LD)
- Regenerative (converter) and non-regenerative (rectifier) headers from 132 kW to 3 MW
- Flexible: IM (open and closed loop) and PMSM (closed loop) control
- Easy to install
- Harmonic distortion mitigation: Sinusoidal-wave Regenerative Header, 12 pulses layout, etc.
- DC bus link sharing: multiple possibilities of power layout
- Redundancy: possible to work at half power in case of maintenance or stack failure
- Fire mode and other possibilities
- Making safety easier: STO as a standard / SS1, SLS and SBC via option card (SIL 2 Cat. 3 PI d)
- 690 VAC series available
- Marine approval DNV + NK
- Equipped with SiC hybrid module

FRENIC-Mini

FRENIC-MINI C2 SERIES

With its rich functionality, compact design, simple operation, and global compatibility, the new FRENIC-Mini elevates the performance of a wide range of devices and equipment.

Including conveyors, fans, pumps, centrifugal separators, and food processing machines - we provide you the system integration, energy efficiency, reduced labour, and lower overall costs you're looking for.

- High performance and multipurpose
- Induction Motor control (V/f and Dynamic torque vector control), PMS Motor control (open loop)
- Slip compensation controller shortens setting time
- Fastest CPU processor in its class
- Optional USB keypad available
- Energy use optimizer
- PID control function
- Cooling fan ON/OFF control function
- Network capabilities standard: RS-485 communications port
- Easier maintenance

FVR-Micro AS1S

FVR-MICRO AS1S

The new version of FVR-Micro (AS1S) combines two major characteristics: it's small and strong. The design is held especially simple, so the user benefits from an easy installation and smooth operations. Its conceptual design ensures saving space and energy, as well as costs.

FRENIC-Micro AS1S is a highly economic inverter for general purpose applications. It matches perfectly any application with limited space and where small capacities are needed, such as e.g. conveyor transports, mixer machines, or small wood-working machineries with basic functions.

- Capacity range from 0.4 to 3.7 kW
- 3-phase 400 V (0.4 to 3.7 kW)
- Single-phase 200 V (0.4 to 2.2 kW)
- Adoption of control system to minimize motor loss
- Equipped with RS-485 as standard
- PID control function
- Analog input / analog output / multi-stage frequency / jog operation / remote/local
- CE mark and UL/cUL approved standards

FRENIC-AQUA AQ1 SERIES

FRENIC-AQUA is Fuji Electric's first slim type inverter.
It is dedicated to a variety of applications of water supply and wastewater treatment systems.
This series follows European trends with keeping high Japanese reliability. Specific functions to prevent damage on the systems and new energy saving functions are installed as standard and positioning FRENIC-AQUA as a high performance inverter on the pumping application market.

- Wide capacity range from 0.75 kW to 710 kW
- IP21 & IP55 with same dimension
- DCR and EMC filter built-in up to 90 kW, built-in EMC filter for all capacities
- Overload capability 110%
- Torque Vector Control
- Battery (OPK-BP)
- Modbus RTU, BACnet MS/TP, Metasys N2; integrated as standard
- Large LCD display, 19 languages + user customizable language
- Specific macros for common pump applications
- Customizable Logic (mini PLC), 14 steps, manages digital + analog signals
- Unit conversion function (kPa, bar, l/min, etc.)
- Real Time Clock (RTC)
- 4 PID Sets

FRENIC-HVAC AR1

INVERTER SERIES
PUMPING & HVAC

FRENIC-HVAC AR1 SERIES

FRENIC-HVAC is dedicated to a variety of HVAC applications. This series follows European requirements while being a high reliability product from Japan.
Specific functions to manage fan and compressor applications and energy saving functions are installed as standard, which is positioning FRENIC-HVAC as a high performance inverter on the HVAC and compressor market.

- Wide capacity range from 0.75 kW to 710 kW
- IP21 & IP55 with same dimension
- DCR and EMC filter built-in up to 90 kW, built-in EMC filter for all capacities
- Overload capability 110%
- Torque Vector Control
- Modbus RTU, BACnet MS/TP, Metasys N2; integrated as standard
- Large LCD display, 19 languages + user customizable language
- Specific macros for common fan and compressor applications
- Customizable Logic (mini PLC), 14 steps, possibility to manage digital and analog signals Real Time Clock (RTC)
- 4PID sets
- Unit conversion function (kPa, bar, l/min, etc.)
- Fire mode (forced operation)
- Catch spinning motor
- Password function

FRENIC-Ace-H

FRENIC-ACE-H SERIES

FRENIC-Ace-H offers optimum capability in terms of energy saving for HVAC and water pumping applications.
Its user friendliness, network compatibility, and long-term reliability are beneficial for long-run performance of systems.
By using customized logic, FRENIC-Ace-H enables to tailor its functionalities for specific requirements at each application.

- Quadruple Rating
- System Protection Functions
  (Slow flow rate, check valve protection, initial acceleration time, over pressure, PID alarms, wire break detection)
- Water supply and drainage system function
  (Dynamic torque vector control, cascade control [up to 4], PID control [2 PID], mutual operation [up to 4], floating method, fire mode, starting mode [Auto search], auto energy saving, customizable logic, mini PLC [200 steps], automatic deceleration, password function)
- STO functional safety function as standard:
  STO SIL 3, Cat 3, PL e
- Built-in EMC filter: Built-in category C2/C3 EMC filter
  (All types are “E”, except for 200 V >30 A: “S” type)
- PM synchronous motor drive: PM motor drive now possible with PM sensorless vector control
- Keypad built-in
- Optional multifunctional keypad

* Available as cabinet solution

FRENIC-Ace Solar Pumping

INVERTER SERIES
PUMPING & HVAC

FRENIC-ACE
for Solar Pumping

With FRENIC-Ace for Solar Pumping we contribute to renewable energy control. Water pumping via solar photovoltaic systems uses solar energy from photovoltaic (PV) panels. FRENIC-Ace acts as the interface between the PV panel und the pump motor and controls easily all system relevant functions.

Submersible pumps are mainly used for ground water extraction in the field of irrigation, potable water extraction or livestock watering. Our optional intelligent monitoring system (IoT) helps to monitor and control the water consumption.

- True and outstanding MPPT function (Maximum Power Point Tracking)
- Start criteria by system conditions and time
- Stop criteria selectable
- Dry pump detection function
- Low power function
- Water tank level control
- It allows to control asynchronous motors and permanent magnets synchronous motors
- Detection of sudden changes of conditions (especially irradiance)
- Two sets of PID gains, for a fast and smooth operation
- Grid connection selectable for maintenance and backup system

DIMENSIONS

- *1: HND Overload capability: 120% for 1 min at 50°C
- *2: [A] = Current
- *3: Grid connection selectable for maintenance and backup system

FRENIC-LIFT LM2A SERIES

In 2005, Fuji Electric designed the first FRENIC-Lift inverter to fulfill the requirements of lift applications. FRENIC-Lift is nowadays one of the most preferred inverter for lift applications in the market.

By using the experiences in market, we have developed the upgraded version of FRENIC-Lift, the LM2A: smaller but smarter.

*Available as wallmounted solution

- Book type frame up to 15 kW
- Dual Mounting (book type)
- Feed through mounting with IP54 heat sink (book type)
- Removable input and output power terminals (book type)
- Contactorless solution compliant to EN81-20
- Different energy saving levels according to ISO 25745
- Easier rescue operation with 24 VDC power supply for control board
- Built-in EMC filter
- Built-in advanced fieldbuses dedicated to lift applications (CANopen CiA DSP 402 & 417, DCP 3 & 4)
- Faster speed and current control loop for easier and faster comfort adjustment
- Removable control terminals
- Two new motor control modes:
  1. Vector control with peripheral PG
  2. Sensorless vector control for rescue operation (PMSM)
- Several certified functions for safety operation
- New software functions for an easier setup
- Customizable logic capability (PLC function)

FRENIC-LIFT LM2C SERIES

LM2 has a new version: LM2C. Excellent price-performance ratio for everyday lift applications. Combine the most important features of our bestseller FRENIC-Lift with the demand of easy, elementary elevator applications - and get our new FRENIC-Lift LM2C.
Cost efficiency and basic structures, not more, not less.
This inverter gets to the point:

Simple application = simple solution.

- Motor control: Induction motor in open loop
- Book type shape. Allows side mounting for the most convenient way of installation depending on space limitations (e.g. door frames)
- Feed through mounting with IP54 heat sink, making cabinet design smaller and cheaper for shaft installation
- Removable input and output power terminals makes the installation easier and faster by pre-wiring
- Contactorless solution compliant to EN81-20
- Different energy saving levels according to ISO 25745
- Easier rescue operation with 24 VDC power supply for control board
- CANopen, DCP and Modbus RTU are available thanks to the 3 built-in communication ports
- Able to control any induction motor in the market
- New coating makes PCB stronger against humidity and dust
- Customizable logic capability (PLC function). Easy programming of your own PLC via loader software, up to 200 steps.

REGENE-RATIVE UNITS

FRENIC-RHC (RHC-E)

Regenerative
Fuji Compact power regenerative PWM converter series

RHC-E SERIES

Converter stack and unit type
RHC series is the active-front-end of Fuji Electric in stack and unit type configuration.

- Rating available in MD and LD
- A capacity range from 45 kW to 6 MW
- Two configurations available: Standard Stack / Phase Stack
- Able to work with isolated and non-isolated transformers
- SiC technology
- 400 VAC, 690 VAC series
- Each RHC type has its associated RHF
- RHF dimensions are equivalent to RHC dimensions

RHF-D SERIES

Filter stack type
RHF series is the compact solution and dedicated filter for the PWM converter (RHC) in the shape of stack type. Charging circuit, harmonic filter and boosting reaction all in one.

- The RHF-D series is a dedicated filter stack for the high power factor PWM converter with power regenerative function (RHC-E Series).
- This device is used in combination with the RHC-E Series, and peripheral devices (filtering circuit, boosting circuit, charging circuit) required by the PWM converter have been combined into a single unit.
- Peripheral device wire reduction and attachment space saving is possible.
- A stack type with same shape as the inverter (stack type) and PWM converter (RHC-E) has been adopted. This has been effective in making panels more compact.
- 690 and 400 VAC Marine Approval: DNV type approval certificate available

FRENIC-eRHC

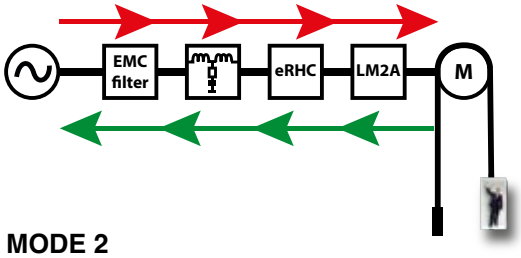
FRENIC-eRHC SERIES

The FRENIC-eRHC series work like an Active Front End when paired with an inverter. They convert the input current into a smoother sinusoidal wave, which helps reduce unwanted electrical noise, meeting the IEEE 519 standard. Plus, they are designed to recycle energy back into the power source, which ultimately saves energy.

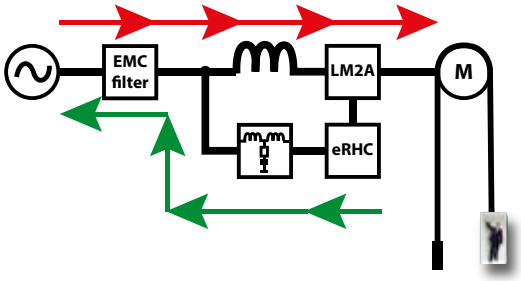
- **Practical Guide for Reducing Electrical Noise**
  Using Pulse Width Modulation (PWM) control significantly cuts down on unwanted electrical noise by creating a smoother sinusoidal waveform on the power supply side. According to the "Guideline for Reducing Electrical Noise for Users Receiving High Voltage or Special High Voltage," issued by the Ministry of Economy, Trade and Industry, setting the converter factor (Ki) to "0" effectively eliminates harmonic disturbances when paired with an inverter. This ensures compliance with the IEEE 519 Standard for noise reduction.
- **Potential for Decreasing Facility Size**
  The control of power factor ensures that the current aligns closely with the voltage phase of the power supply. This means the equipment operates with a nearly perfect power factor of "1." Consequently, it becomes feasible to downsize power transformers and other devices compared to what would be required without the converter.

WORKING MODES

MODE 1
Active Front End (AFE)



MODE 2
Regenerated energy converter ("Electronic Braking Resistor")



- **Improved Braking Performance**
  During frequent acceleration and machine operation, any regenerated energy is sent back to the power supply. This results in energy savings during these operations. Moreover, as the current waveform remains sinusoidal during regeneration, it poses no disruption to the power supply system.

SERVO SYSTEMS

ALPHA7

ALPHA7
Scan me or click me

- **Speed:** Speed and frequency response at 3.2 kHz realizes ultra-high-speed control. Fuji's proprietary control algorithm achieves a speed and frequency response at 3.2kHz, the highest level in the industry. This reduces the tact time, enabling high-speed control.
- **Strength:** Maximum instantaneous torque of 350%* enables response to high-speed commands. The maximum instantaneous torque of the servo motor is now as high as 350%. *This is applicable only to certain models.
- **Precision:** The 24-bit fine resolution INC/ABS encoder significantly improves the precision of control. The encoder resolution is now as high as 24 bits. This provides much higher control precision than before, enabling high-precision control.
- **Safety:** Safer operations are ensured by various safety functions. Standard equipment includes the STO function defined in the international standard IEC61800-5-2. In addition, the WSU-ST1 option adds support for SS1, SLS, SBC, and SSM. These safety functions can be easily configured with parameters.
- **EtherCAT communications:** EtherCAT communications for command interface, parameter editing, and monitoring.VC Amplifier model supports CoE compliant with CiA402 drive profile with six different control modes: pp, pv, hm, csp, csv, cst.
- The amplifier can be used in asynchronous (Free run) mode or synchronous (DC, SM2) mode. Minimum cycle time 125us. Maximum length up to 100m between nodes with a maximum of 65535 units connectable.

ALPHA 7 SERVO DRIVES

When industrial high-tech equipment is developing and advancing fast, you need a well responsive servo system which proves reliable high precision. The supremely elaborated control functions turned Fuji Servo System ALPHA7 into one of the fastest and most precise servo systems on the market of drive control. It supports a wide range of monitoring functions and delivers extreme safety at the same time. Customer requirements are being met to the point: it improves productivity, reduces costs, and provides safety.

MONITOUCH HMI

X1 SERIES

The new X1 series programmable operator interface solutions brings with it a new level of IT integration and creates a flexible solution for the new generation of Smart Factories. It presents an edge-computing solution to accelerate the transition the smart production sites.

- The OS is Windows 10, allowing all familiar applications to run smoothly on its Quad Core/Quad Thread, 1.6GHz processor and 4Gb of RAM.
- Broad range of communication possibilities – dual LAN, Serial and multiple USB ports (USB3.0 x 2 & USB2.0 x 2). Options for WLAN and Bluetooth add further enhancements.
- Multi-media with HDMI output and Audio output
- Supports OPC UA (Server & Client compatibility), MQTT, Microsoft AZURE and SQL Server
- Capacitive (PCAP) Touchscreen
- Available in either 12.1" (WXGA 1280x800) or 15.1" (FHD1920x1080)

TECHNOSHOT SERIES

Powerful connectivity on bright TFT colour liquid crystal wide screens.
With its sophisticated communication technology, the TECHNOSHOT becomes a strong and price-competitive HMI in the European market.

MONITOUCH V10

V10 SERIES

Introducing the revolutionary Monitouch V10 series – your ultimate solution for stress-free operations in the world of HMI technology. Enjoy smooth navigation and effortless switching.

One of the outstanding features of the V10 series is its lightning-fast rendering capability, one of the highest screen switching speeds in the market. No more delays: instead you'll get seamless transitions between screens, so you can effortlessly navigate your HMI experience.

The V10 series also offers the fastest available response time for inputs. Every touch and interaction is immediately fed back, ensuring a fluid and responsive user interface. With the shortest startup time after power-on, you'll be up and running in no time, and you won't waste valuable minutes waiting for your HMI system to initialize.

SOLAR PUMPING SOLUTION

Our European Solar Pumping Solution offers an innovative off-grid solution for irrigation and potable water extraction. This system represents significant savings, the costs are fixed and known. By eliminating the need for diesel and butane gas, it relies entirely on renewable energy sources, making it environmentally friendly. With its high reliability and long lifespan, this solution also operates quietly and automatically, ensuring uninterrupted functionality. It also offers a wide capacity range, simple installation, and easy startup process, along with low maintenance requirements. Overall, Fuji Electric's Solar Pumping Solution provides an efficient and sustainable water supply solution without contributing to fume pollution.

Designed, developed and assembled in Europe.

- True and outstanding MPPT function (Maximum Power Point Tracking)
- Start criteria by system conditions and time
- Stop criteria selectable
- Dry pump detection function
- Low power function
- It allows to control asynchronous motors and permanent magnets synchronous motors
- Detection of sudden changes of conditions (especially irradiance)
- Two sets of PID gains, for a fast and smooth operation
- Water tank level control
- Grid connection selectable for maintenance and backup system
